EDUCATION

Bachelor of Computer Science

University of Waterloo

Sept 2020 – June 2025

Waterloo, ON

- Relevant Coursework: Software Architecture, AI, Computer Networks, Operating Systems, Secure Programming

EXPERIENCE

Software Engineer | Android

Accedo Inc.

Sept 2024 – Dec 2024

Toronto, ON

- Built an URL fallback system to cut missing images by **95%**, preventing a **2-month** release delay for **500,000+** users.
- Refactored **7,000+** LOC to follow SOLID principles, reducing complexity by **30%** and increasing test coverage by **40%**.
- Resolved **40+** UI issues via layout fixes, API tweaks, and coroutine timing, cutting Apple-Android disparities by **90%**.

Software Engineer | Backend

Spurry Inc.

Apr 2023 – Aug 2023

Toronto, ON

- Developed an AI-powered resume tool leveraging Vertex AI and prompt tuning; implemented A/B testing on prompt variants and analyzed user acceptance logs to refine performance, resulting in a **61%** increase in paid conversion rate.
- Implemented caching and image asset deduplication, cutting Google Cloud costs by **55%** and API tail latency by **30%**.
- Streamlined Google OAuth and Stripe onboarding on a Node.js backend, driving **200** subscriptions in **3 weeks**.
- Set up CI/CD with GitHub Actions to automate testing and deployment to staging server, speeding up release cycles.

Software Engineer | Full-Stack

University of Waterloo

Sept 2022 – Dec 2022

Waterloo, ON

- Applied Redis caching and offset-limit pagination to handle large datasets, improving API response times by **60%**.
- Launched a citation autofill microservice in Go using metadata parsing, reducing researcher input time by **90%**.
- Built microservice to identify duplicate submissions and merge them, consolidating **6%** of entries into existing records.
- Led Agile development of a collaborative research platform for literary analysis, boosting contributor activity.

Software Engineer | Flutter

Uncaught Exception Inc.

Sept 2021 – Apr 2022

Vancouver, BC

- Architected a core class to extract and process Figma API data, enabling **60%** faster code generation logic.
- Automated boilerplate generation and simplified dependency injection setup, improving dev speed by **30%**.
- Built interactive diagrams for rafters, arcs, and triangles, helping grow construction calculator app to **10K+** users.
- Built reusable components and optimized string stream output, accelerating Figma-to-Flutter generation to O(n) time.

PROJECTS

SpinChoice: Gamified Decision Assistant [GitHub]

- Built an AI-powered decision app with spinners and visual feedback, gamifying low-stakes choices.

TECHNICAL SKILLS

Languages: Python, C++, Java, Go, JavaScript/TypeScript, HTML/CSS, Node.js, Kotlin, Flutter/Dart

Frameworks/Tech: React, SQL (PostgreSQL, NoSQL), Docker, GCP, Firebase, Spring Boot, Linux
